Technology, Engineering

Our STEAM curriculum has been created by innovative and creative STEAM educators, specifically for young scientists. The program stimulates the excitement of learning through experiments, discoveries, and new wonders.

# CORE VALUE 6

## STEAM Education

STEAM education ignites children's natural excitement for learning! It is a curriculum created by former International Baccalaureate (IB) school teachers and is based on children's highly inquisitive nature. Developed by experienced teachers with over 15 years of teaching science and leveraging insights from Harvard University, this STEAM education program allows students to learn in an exciting way to discover more about the world.
